PERSONAL STATEMENT

I am a 38-year-old Senior Frontend Engineer based in Potsdam, with a deep passion for Design, Architecture, Web Development, AI Engineering, Animation, Layout, and Usability. I have a particular expertise in React.js and a strong dedication to efficiency and precision.

With over 13 years of professional experience, including nearly 2 years in design and 10 years specializing in web development, my primary focus has always been on frontend technologies.

At Meplato GmbH, I worked on the development and evolution of a B2B eProcurement platform, helping organizations digitize and streamline complex procurement processes. My primary focus was on shaping and enhancing the frontend architecture within a microservice-based platform, developing web interfaces for multiple modules, and integrating them via APIs. A major part of this work involved building and maintaining a shared UI library with reusable components and design patterns, ensuring a consistent, scalable, and intuitive user experience across applications.

Previously, as a Senior Frontend Engineer at workstreams.ai, I guided parts of the frontend development process and focused on crafting engaging and user-friendly interfaces using JavaScript, CSS, and React. With a steadfast commitment to both form and function, my designs seamlessly blend aesthetics with user-centric functionality.

Over the past years, I have also gained significant experience in leveraging AI agents efficiently to optimize development workflows, automate repetitive tasks, and support data-driven decision-making in frontend projects. Across all these roles, my work combines technical precision, architecture-focused thinking, and design-driven principles to deliver robust, maintainable, and high-performance web applications with user experience at the forefront.
